

To our Valued Customers:

This letter is intended for the segment of our customers requiring RoHS compliant DC/DC Converters.

Semiconductor Circuits, Inc. is actively pursuing lead-free/RoHS compliance in direct response to RoHS legislation enacted in Europe, market forces and customer requirements.

For our customers who have discussed their future plans for RoHS compliant parts, the majority have stated they prefer that the part number for their DC/DC converter remain the same. Based on these discussions we will continue to use our existing part numbers.

To identify our RoHS compliant converters, we will add an "LF" suffix to the three digit date code on the product label. For those customers that require a different part number to indicate RoHS compliance, we will assign special part numbers as required.

For additional information, please feel free to contact us.
